

A stacked bar chart showing the distribution of 1000 respondents by age group and gender across 10 categories. The categories are represented by the columns, and the age groups are represented by the segments within each bar. The gender distribution is indicated by the color of the segments: blue for male and red for female. The segments are stacked from bottom to top in the following order: blue, green, red, light blue, orange, light green, teal, light orange, and pink. The total height of each bar represents the total number of respondents in that category, which is 1000.
